List PWS ID #s for all Community Water Systems included in this CCR
The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must mail, fax of the companies of the CCR and Certification to MSDH. Please check all boxes that apply.
Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
Advertisement in local paper (attach copy of advertisement) On water bills (attach copy of bill) Email message (MUST Email the message to the address below) Other
Date(s) customers were informed:/,
CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct deliver methods used
Date Mailed/Distributed:/_/
CCR was distributed by Email (MUST Email MSDH a copy)  As a URL (Provide URL  As an attachment  As text within the body of the email message
CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)
Name of Newspaper: COUMBUS Packet
Date Published: $6/19/14$
CCR was posted in public places. (Attach list of locations)  Date Posted:/
CCR was posted on a publicly accessible internet site at the following address ( <b>DIRECT URL REQUIRED</b> ):
CERTIFICATION  I hereby certify that the 2013 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply. ## 2013 Annual Drinking Water Quality Report 2014 300 24 AM 10: 11 South Lowndes Water Association PWS#: 0440097

The second of th

May 2014

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from a well drawing from the Gordo Formation Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and its available for viewing upon request. The well for the South Lowndes Water Association has received a lower susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact Frances Fisher at 682.329.3929. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Tuesday of each month at 5:00 PM at the Community Bldg, 6433 Hardy Billups Road — Crawford,

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2013 in cases where monitoring wasn't required in 2013, the table reflects the most recent results. As water travels over the surface of fand or underground, it dissolves naturally occurring minerals and, in some cases, adioactive materials and can pick up substances or contaminants from the presence of animals or from human activity, microbial contaminants, such as salts and metals, which can be as wiruses and bacteria, that may come from sewage freatment plants, specific systems, agricultural livestock operations, and widiffe; inorganic contaminants, such as salts and metals, which can be assurable contaminants and widiffe; inorganic contaminants, such as salts and metals, which can be assurable of some contaminants, and such as agriculture, urban storm-water runoff, and residential uses, organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial variety of sources such as agriculture, urban storm-water runoff, and residential uses, organic chemical contaminants, which can be naturally occurring or he the result of oil and gas production and processes and petrolerum production, and can also come from gas stations and septic systems; andioactive contaminants, which can be naturally occurring or he the result of oil and gas production and mining activities. In order to ensure that they water is safe to drink, EPA prescribes regulations that limit the amount in contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonable expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Lavel - the concentration of a contaminant which, if exceeded, leggers freatment or other requirements which a water system must follow.

Meximum Contaminant Level (MCL) - The "Meximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best exhaulted contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best exhaulted contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the set of a contaminant that is allowed in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Cultainsian Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Parts per million (ppm) or Militigrams per liter (mpti) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000.000.

				TEST RESU	LTS				
Contaminant	Violation /	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCUACL	nit Measure -ment	MCLG	MCL.		Likely Source of Contemination
Inorganic	Contam	inants							
10. Barium		2012	.027	o Range	ррт	2	2	<ol> <li>Discharge of drilling wastes: discharge from metal refinences erosion of natural deposits</li> </ol>	
13. Chromlum		2012	1,68	α Range	ррь	100	steel and p mills; erosk		Discharge from steel and pulp mills; erosion of natural deposits
14. Copper		2009/11:	.2	0	ppm	1.3	AL1.3	3 Corrosion of household plumb systems; erosion of natural deposits; leaching from wood preservatives	
16. Fluoride		2012	.138	o Range	ppm	4	4	additive which	tural deposits; wat h promotes strong rge from fertilizer a tories
Disinfection	on By-P	roducts							
Chlorine	T * T	2013	1.1	79 1.87 mg/	·	MDRL 4 Water additive used to microbes		sed to control	

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of fead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been estiling for several hours, you can minimize the potential for fead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Holline or at http://www.epa.gov/safewater/lead. The Mississippl State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in diriking water than this general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergoing organ transplants, people with HIV/MDS or other immune system disorders, some ledsry, and infants can be particularly at risk from infections. These people should seek advice about diriking water from their health care provings. EARCDC guidelines on appropriate means to lessen the risk of infection by cryptosportium and other microbiological contaminants are available from the Safe Diriking Water Holline 1400-426-4781.

The South Lowndes Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of tife and our children's future.
